#### fun.exe Exercises for Chapter fun

#### Exercise fun.corporationism

- a. Let two resistors with resistances 1 k $\Omega$  and 2 k $\Omega$  be connected in series. What is their combined effective resistance?
- b. Let two resistors R<sub>1</sub> and R<sub>2</sub> be connected in series. Prove that their combined effective resistance is greater than that of either resistor, individually.
- c. Let two resistors with resistances 1 k $\Omega$  and 2 k $\Omega$  be connected in parallel. What is their combined effective resistance? d. Let any two resistors R<sub>1</sub> and R<sub>2</sub> be
- their combined effective resistance? Let any two resistors  $R_1$  and  $R_2$  be connected in parallel. Prove that their combined effective resistance is less than that of either resistor, individually.

## $R_{1} = \frac{1}{R_{1}} + \frac{1}{R_{2}}$ $R_{2} = \frac{1}{\frac{1}{R_{1}}} + \frac{1}{\frac{1}{R_{2}}}$ $R_{3} = \frac{1}{\frac{1}{R_{1}}} + \frac{1}{\frac{1}{R_{2}}}$ $R_{4} = \frac{1}{\frac{1}{R_{1}}} + \frac{1}{\frac{1}{R_{2}}}$ $R_{5} = \frac{1}{\frac{1}{R_{1}}} + \frac{1}{\frac{1}{R_{2}}}$

#### Exercise fun.pseudoscarus

Beginning with the definition of electrical power and the elemental equation of an ideal resistor, find

- isistor, find a. an expression for the power dissipated by a resistor in terms of voltage  $v_R$  and resistance R, only; and
- b. an expression for the power dissipated by a resistor in terms of current  $\mathfrak{i}_R$  and resistance R, only.

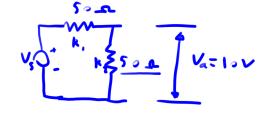

# $R_{T} = \frac{1}{R_{1}} + \frac{1}{R_{1}} \left(\frac{R_{1}}{R_{1}}\right)$ $R_{T} = \frac{R_{1}}{1 + R_{1}/R_{2}}$ $\left(1 + \frac{R_{1}}{R_{1}}\right) R_{T} = R_{1}$ $\left(1 + \frac{R_{2}}{R_{1}}\right) R_{2} > 1$

#### Exercise fun.banana

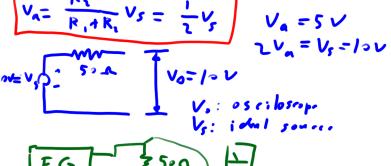

An unregulated function generator has a 50  $\Omega$  output resistance. The front panel displays a nominal voltage amplitude of 10 V, which assumes a matching load of 50  $\Omega$ . However, the output is not connected to this nominal matching load. Instead, it is connected to an oscilloscope with high input resistance—let's

say it's infinite. Respond to the following questions and imperatives about this situation.

- a. Draw a circuit diagram.
- b. Using the given information about the "nominal" voltage amplitude, determine what the ideal source voltage amplitude V<sub>s</sub> should be in your circuit diagram/function generator model.
- c. Solve for the actual voltage amplitude v<sub>a</sub> at the oscilloscope if the front panel says 5
   V amplitude.

6. This exercise was inspired by Horowitz and Hill. (Horowitz and Hill, The Art of Electronics)

### Exercise fun.doorbell

Consider two signals with voltage ratios expressed in decibels as follows. What are the corresponding power and voltage amplitude ratios?<sup>6</sup>

- a. 0 dB
- b. 3 dBc. 10 dBd. 20 dB

## Exercise fun.crumble

For the circuit diagram below with voltage source  $V_S$  and output voltage  $\nu_o$ , (a) construct a Thévenin equivalent circuit. Be sure to specify the equivalent source  $V_e$  and resistance  $R_e$ . Let  $R_1=R_2=1$  k $\Omega$  and  $R_3=2$  k $\Omega$ . (b) Convert the Thévenin equivalent circuit from (a) to a Norton equivalent.

$$V_S \stackrel{\overset{}{\longleftarrow}}{\stackrel{}{\longrightarrow}} R_2 \stackrel{\overset{}{\nearrow}}{\nearrow} R_3 v_0$$

## Exercise fun.coracomorph

For the circuit diagram below with current source  $I_S$  and output voltage  $\nu_o$ , (a) construct a Norton equivalent circuit. Be sure to specify the equivalent source  $I_e$  and resistance  $R_e$ . Let  $R_1=R_2=1$  k $\Omega$  and  $R_3=2$  k $\Omega$ . (b) Convert the Norton equivalent circuit from (a) to a Thévenin equivalent.

$$\begin{array}{c|c} R_1 & R_3 \\ \hline \\ R_2 & \nu_o \\ \hline \\ \end{array}$$

## Exercise fun.masticurous

For the circuit diagram below with voltage source  $V_S$  and output voltage  $\nu_o$ , (a) construct a Norton equivalent circuit. Be sure to specify the equivalent source  $I_e$  and resistance  $R_e$ . Let  $R_1=1~k\Omega$ ,  $R_2=2~k\Omega$ , and  $R_3=3~k\Omega$ . (b) Convert the Norton equivalent circuit from (a) to a Thévenin equivalent.

$$V_{S}$$
 $+$ 
 $R_{2}$ 
 $V_{o}$ 
 $R_{2}$ 
 $V_{o}$
